

CURRENT CONTENT INVENTORY

EcoLearn lesson catalog

All six current lesson items used by the web and Expo experiences, including timing, XP, instructional points, quiz choices, correct answers, explanations, and related official DSWA Education videos.

6	175 XP	33 min	7
current lessons	total available lesson XP	combined estimated time	official DSWA videos mapped

CONTENT SNAPSHOT

Web and Expo lesson IDs, titles, topics, XP, questions, choices, answers, and explanations are aligned as of August 20, 2026. The web experience additionally presents three fact cards per lesson.

Catalog at a glance

#	Lesson	Topic	Time	XP	Related DSWA focus
1	The recycling loop	Recycling basics	4 min	20	DSWA Overview, DSWA Transfer Station Tour, DSWA Delaware Recycling Center Tour
2	Plastic, decoded	Materials	6 min	30	DSWA Delaware Recycling Center Tour
3	Wishcycling myths	Smart sorting	5 min	25	DSWA Special Collection Events, DSWA Electronics Recycling, DSWA Delaware Landfill Tour
4	Food's second life	Composting	7 min	35	DSWA Delaware Landfill Tour
5	Glass and metal basics	Materials	5 min	25	DSWA Delaware Recycling Center Tour
6	Smarter compost habits	Organic waste	6 min	30	DSWA Delaware Landfill Tour

Sequence design

- Lessons unlock in order. A correct quiz answer is required before completion is recorded.
- Completion uses the same UUID on web and Expo so XP and progress can sync through Supabase.
- Official DSWA videos are enrichment; they do not replace the Delaware DNREC item protocol used by the scanner.
- Teacher/classroom assignments are a deferred roadmap item and are not represented as current functionality.

Content review note

Several statements use general recycling or composting teaching language. Before a broad school rollout, DSWA Education should review grade level, terminology, captions/transcripts, and any claim that could vary by Delaware program.

The recycling loop

4 min	20 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Recycling is a system, not a wish. Careful sorting lets materials become useful things again instead of waste.

Instructional points

1	Start clean	Food and liquid can contaminate batches. Empty containers and give them a quick rinse.
2	Keep it loose	Loose items can be sorted by equipment. Plastic bags wrap around machinery, so use a dedicated drop-off.
3	When in doubt, check	Rules differ between programs. Confirm the exact item instead of guessing.

Knowledge check

Which action best helps a recycling facility sort materials?

A	Put recyclables in a plastic bag	
B	Keep empty items loose in the bin	CORRECT
C	Recycle every item with a triangle	

ANSWER EXPLANATION

Loose, clean, empty items are much easier for a facility to sort.

Plastic, decoded

6 min	30 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Plastic numbers identify resin types, but the number alone does not promise that an item belongs in the curbside bin.

Instructional points

1	Shape matters	Bottles, jars, and tubs are commonly accepted because there are reliable markets for them.
2	Film is different	Bags, wrappers, and film are often recyclable only through store drop-off programs.
3	Caps stay on	In Delaware, caps and lids can go back on accepted plastic containers. Check the exact item.

Knowledge check

What is the safest choice for plastic bags and film?

A	Place them loose in curbside recycling	
B	Use a dedicated store drop-off if available	CORRECT
C	Put them in with paper	

ANSWER EXPLANATION

Film plastic tangles sorting equipment; use a dedicated film collection program.

Wishcycling myths

5 min	25 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Wishcycling happens when good intentions put the wrong item in recycling. It raises costs and can spoil recoverable material.

Instructional points

1	No mystery items	If the material or program is unknown, keep the item out of curbside recycling until it is checked.
2	Grease changes paper	Food-soiled cardboard and paper fibers cannot be recycled into clean paper products.
3	Special waste needs special handling	Batteries, electronics, and chemicals can be hazardous. Find a dedicated collection point.

Knowledge check

Why should a greasy pizza box stay out of paper recycling?

A	It is too heavy	
B	Grease contaminates the paper fibers	CORRECT
C	Cardboard is never recyclable	

ANSWER EXPLANATION

Clean cardboard is valuable; grease makes its fibers unsuitable for recycling.

Food's second life

7 min	35 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Food scraps are a resource. Composting returns nutrients to soil and helps keep methane-producing organic waste out of landfill.

Instructional points

1	Compost the right scraps	Fruit and vegetable scraps, coffee grounds, and yard trimmings are useful starting materials.
2	Balance matters	Healthy compost needs moist green material and dry brown material such as leaves or shredded paper.
3	Use Delaware programs	If a backyard bin is not available, check for a Delaware food-scrap option.

Knowledge check

Which is a useful 'brown' material for a compost pile?

A	Dry leaves	CORRECT
B	A plastic wrapper	
C	A battery	

ANSWER EXPLANATION

Dry leaves add carbon-rich brown material and help balance moist food scraps.

Glass and metal basics

5 min	25 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Glass and metal are durable materials, but they still need the right preparation before they go into the bin.

Instructional points

1	Rinse first	Leftover food or drink can make a clean container unusable, so empty and rinse items before sorting.
2	Separate hazardous items	Broken glass, sharp metal, and pressurized containers may need special handling.
3	Check lids and caps	Put caps and lids back on accepted containers and check DNREC guidance for the exact item.

Knowledge check

What should you do before recycling a food jar or soda can?

A	Leave food residue inside	
B	Empty and rinse it	CORRECT
C	Wrap it in a bag	

ANSWER EXPLANATION

Empty, clean containers give the recycling system the best chance of success.

Smarter compost habits

6 min	30 XP	3	1 quiz
estimated time	completion reward	key ideas	required check

Lesson introduction

WHY IT MATTERS

Composting works best when you understand what belongs in the pile and what should stay out.

Instructional points

1	Green and brown	Moist food scraps are green material; dry leaves and paper are brown material that add carbon and structure.
2	Avoid contamination	Plastic labels, stickers, and compostable-looking packaging can cause problems if they do not break down.
3	Local pickup helps	If home composting is not practical, some cities and schools collect food scraps separately.

Knowledge check

Which item is usually safe to add to a compost bin?

A	Dry leaves	CORRECT
B	A battery	
C	Plastic cutlery	

ANSWER EXPLANATION

Dry leaves are a classic compost ingredient and help balance food scraps.

Official DSWA Education video library

The seven videos below are embedded or linked contextually in EcoLearn. Scanner selection uses verified item/category words, so an electronics result selects the electronics video rather than a generic product-brand match.

Video	Primary use in EcoLearn
DSWA Overview	Recycling-loop orientation and Learn library
DSWA Transfer Station Tour	Waste journey and recycling-loop context
DSWA Delaware Landfill Tour	Landfill, waste, and compost context
DSWA Delaware Recycling Center Tour	Curbside materials and sorting lessons/results
DSWA Electronics Recycling	Electronics lesson enrichment and electronics scan results
DSWA Special Collection Events	Batteries, hazardous materials, electronics, paint, chemicals
Dover Environmental Education Center	Educator resources and field-trip awareness

Next editorial review

- Ask DSWA Education to validate each lesson's grade-level language and Delaware specificity.
- Add captions/transcripts or text alternatives for every video used in school settings.
- Move lesson definitions into a shared web/mobile package to prevent future content drift.
- Do not implement teacher classrooms until the DSWA response and under-13 data model are approved.
